

## **Assistant/Associate/Full Professor in Epidemiology Tenure Track Faculty Position**

The Department of Public Health Sciences at the UConn School of Medicine seeks to fill a tenure-track position focused on infectious diseases. The successful candidate will have doctoral training in epidemiology and expertise in the analysis of population level data regarding pathogen transmission and mechanisms of infectious disease control. While the position does not require a disease-specific focus, candidates who combine methodological interests with experience in field epidemiology, data collection and collaboration with public health agencies on the study of emerging infections and population disease control strategies are encouraged to apply. We welcome applications from candidates for senior rank who demonstrate national visibility through an ongoing record of extramural funding and publications, and will consider applications from candidates at the rank of Assistant Professor who have completed post-doctoral training and offer evidence of independent scholarship and research productivity.

The Department of Public Health Sciences offers an MPH, PhD and certificates in addiction research, disabilities and disparities, and is a key contributor to the medical/dental curriculum. Our faculty has a strong culture of collaborative and integrative work, conducting research on a range of topics and maintaining extensive associations with international, national, state and local health agencies. (See <https://health.uconn.edu/public-health-sciences> for a full description of our personnel and setting). The Jackson Laboratory for Genomic Medicine, located on our campus, is affiliated with the Medical School, and opportunities for collaborative work with our State's Department of Public Health and regional healthcare delivery systems are plentiful.

The preferred person to fill this position will have a federally funded research portfolio, an excellent publication record as first or senior author in respected academic journals, experience as a teacher and mentor to students on the dynamics and control of infectious diseases and a commitment to the intellectual life of our active, productive and growing Department by forming new collaborations within the department and across the University.

This is a 12-month full-salary tenure track position. Interested candidates should submit a cover letter and curriculum vitae at <http://jobs.uchc.edu>, search number 2020-185.

*UConn Health is an Affirmative Action/Equal Opportunity Employer M/F/V/PWD/PV employer.*
